Message from the ACM SenSys 2022 General Co-Chairs

Welcome to ACM SenSys 2022, the 20th ACM Conference on Embedded Networked Sensor Systems, the premier computer systems conference focused on networked sensing systems and applications. The community's commitment to advancing the state-of-the-art in embedded sensing research allowed us to host the first in-person SenSys since the start of the COVID-19 pandemic and brought special attention to its 20th anniversary, celebrating a long history of impactful research contributions.

For those that made it to the conference in Boston, Massachusetts, we hoped you enjoyed exploring the city and had a chance to see some of its historical roots and experienced the vibrant academic atmosphere resulting from the city's large number of colleges and universities.

For all the participants, whether in-person or remote, we are extremely thankful for your contributions to the success of ACM Sensys 2022, and hope you had a fulfilling conference experience, with a technical program composed of two keynote speeches (one jointly with BuildSys), 52 full papers, 8 workshops (including the PhD forum with BuildSys), 35 posters, and 19 demos. All presentations, whether they were delivered in-person or remotely, were recorded and are being made available after the conference.

SenSys 2022 would not have been possible without the commitment of many people, who generously contributed with their work to a successful conference, specifically the Technical Program Committee Chairs and Members, Workshop Chair, Journal Track Chairs, PhD Forum Chair, Local Arrangements and Online Support Chair, Poster and Demo Chair, Web Chair, Finance Chairs, Publicity Chairs, Publication Chairs, Sponsorship Chairs, and, last but not least, the Student Volunteers.

Last but not least, please join us in thanking our sponsors, namely QUALCOMM, Nokia Bell Labs, Google, and the Manning College of Information and Computer Sciences at UMass Amherst. Special thanks are due to April Mosqus and John Otero, of ACM, for their patience and competent support, and to ACM SIGMOBILE, SIGARCH, and SIGMETRICS for sponsoring 11 student travel grants.

Jeremy Gummeson (University of Massachusetts Amherst)
Sunghoon Ivan Lee (University of Massachusetts Amherst)
ACM SenSys 2022 General Co-Chairs

Message from the ACM SenSys 2022 Program Co-Chairs

Welcome to the 20th ACM Conference on Embedded Networked Sensor Systems (SenSys 2022). SenSys is a highly selective, single-track forum for research on systems issues of sensors and sensor-enabled smart systems.

We are excited to announce this program and witness the field thriving despite the challenges during the COVID pandemic. This year we received a total of 209 submissions, one of the highest numbers in the history of SenSys. All papers went through a rigorous double-blind reviewing process by a Technical Program Committee that consisted of 65 world-class experts. Each of the reviewed papers received at least three reviews. All papers with at least one week-accept entered the second phase, in which they received at least three more reviews. A total of 159 papers entered the second phase, out of which 57 were discussed at two virtual PC meetings held on September 8th and 9th. During these meetings, the TPC selected 52 papers to enter the shepherding process. Each conditionally accepted paper was shepherded by a TPC member to ensure that the reviewers' concerns were addressed. A 'heavy shepherding' policy was adopted, and many papers were asked to provide new experimental results. Finally, all 52 papers were accepted to appear in the program, which rendered an acceptance ratio of 24.8%. The TPC were in general agreement that the quality of conference program is very high. This is also supported by the fact that the average review score of all accepted papers is 3.19 (where 3 corresponds to 'weak accept'), which is consistent with recent years. The accepted papers collectively cover many fundamental and cutting-edge aspects of sensor network systems. These include a broad set of application areas, tools, and hardware/software.

Throughout the review and shepherding process, program committee members including the program co-chairs did not have access to the reviews or discussions of the papers with conflicts of interest. After the shepherding process concluded, we identified the following 7 Best Paper Award finalists according to the review scores and comments:

- Bracelet+: Harvesting the Leaked RF Energy in VLC with Wearable Bracelet Antenna
- Hearing Heartbeat from Voice: Towards Next Generation Voice-User Interfaces with Cardiac Sensing Functions
- MicNest: Long-Range Instant Acoustic Localization of Drones in Precise Landing
- HyLink: Towards High Throughput LPWANs with LoRa Compatible Communication
- BlastNet: Exploiting Duo-Blocks for Cross-Processor Real-Time DNN Inference
- PriMask: Cascadable and Collusion-Resilient Data Masking for Mobile Cloud Inference
- DIPS: Debug Intermittently-Powered Systems Like Any Embedded System

We formed a Best Paper Award Committee, which is chaired by Polly Huang and includes Xiaofan (Fred) Jiang, Julie McCann, and Kay Römer. The committee finally selected a Best Paper Award and a Best Paper Award Runner-Up, which were announced at the conference.

As TPC co-chairs, we would like to thank the authors for submitting their best work to the conference. We are also grateful to have dedicated TPC members who demonstrated great flexibility by accommodating the changing deadlines and the compressed review timeline. Furthermore, despite these challenges, the committee members worked tirelessly to identify novel and significant contributions as well as to provide constructive feedback to the authors of all papers.

Finally, we would like to thank the entire organizing committee, and especially General Co-Chairs Jeremy Gummesson and Sunghoon Ivan Lee for their assistance. This program could not have been organized without their dedication and help. We hope you enjoy the program!

Message from the ACM SenSys 2022 Workshop Chairs

Welcome to the seven workshops and two tutorials co-located with ACM SenSys in 2022. This year, the workshops and tutorials address a multitude of emerging and interesting research areas. The broad areas of interest in sensor systems design were low-power systems, data collection, AI for IoT, energy storage, and location estimation for blockchain, agriculture, and urban sensing applications. In particular, the following workshops were organized on Sunday November 6th 2022:

- The Tenth Workshop on Energy Harvesting and Energy-Neutral Systems (ENSSys'22), <http://www.enssys.org/>, organized by: Sebastian Bader (Mid Sweden University), Bashima Islam (Worcester Polytechnic Institute), Michele Magno, (ETH Zurich), Geoff V. Merrett (University of Southampton)

- The Fourth Workshop on Challenges in Artificial Intelligence and Machine Learning for Internet of Things (AIChallengeIoT'22), <https://aichallengeiot.github.io/>, organized by: Luis Garcia (University of Southern California, ISI), Dezhi Hong (Amazon)

- The First Workshop on Urban Sensor Networks (USN'22), <https://sites.google.com/g.harvard.edu/acmusn2022/home>, organized by: Alex Cabral (Harvard University), Vikram Iyer (University of Washington)

- The Fifth SenSys+BuildSys Workshop on Data: Acquisition to Analysis (DATA'22), <https://data-workshop.github.io/DATA2022/>, organized by: Gabe Fierro (Colorado School of Mines), Shiwei Fang (UMass Amherst)

- The Fourth Workshop on Blockchain-enabled Networked Sensor Systems (BlockSys'22), <https://acmblocksys.github.io/blocksys2022/>, organized by: Gowri Sankar Ramachandran (Queensland University of Technology, Australia), Bhaskar Krishnamachari (University of Southern California), Salil Kanhere (University of New South Wales, Australia)

- The First Workshop on Internet-of-Things and Sensing for Agriculture and Food Systems (AgSys'22), <https://sites.google.com/uw.edu/agsys2022/home>, organized by: Vaishnavi Ranganathan (Microsoft Research), Zerina Kapetanovic (Microsoft Research and Stanford), Tusher Chakraborty (Microsoft Research)

- The Fourth Workshop on Continual and Multimodal Learning for Internet of Things (CMLIoT'22), <https://cmliot2022.github.io/>, organized by: Stephen Xia (University of California, Berkeley and Columbia University), Jingxiao Liu (Stanford University), Tong Yu (Adobe Research), Handong Zhao (Adobe Research), Ruiyi Zhang (Adobe Research)

- Tutorial: Energy storage for low-power wireless embedded systems, organized by: Laura Marie Feeney, Per Gunningberg, and Christian Rohner from Uppsala University
- Tutorial: Location Estimation from the Ground Up, organized by: Sivan Toledo, Tel Aviv University

On behalf of the organizing committee, we appreciate the intellectual and logistical efforts of the workshop organizers. Furthermore, we would like to sincerely thank the workshop authors for submitting their novel work, and the workshop TPC members for their timely and constructive reviews. Last but not least, we would like to explicitly thank the general chairs Jeremy and Ivan for their strong support along the process. We encourage the readers to take advantage of the state-of-the-art research in workshop proceedings. Hopefully, the workshops will be instrumental for shaping your future work and contributions to the research community.

Pat Pannuto (University of California, San Diego), Fatima Anwar (UMass Amherst)
- SenSys 2022 Workshop Chairs

ACM Workshop ENSsys 2022

Message from the Chairs

It is our pleasure to welcome you to the 10th International Workshop on Energy Harvesting & Energy Neutral Sensing Systems – ENSsys '22, co-located with ACM SenSys '22. With a long history and previous editions in many places around the world, we are happy that ENSsys continues to be organized as a workshop at SenSys.

ENSsys reflects the growing worldwide interest and research activity in energy-harvesting and energy-neutral sensing systems. Complementing the topics of ACM SenSys, ENSsys brings together international researchers to explore the challenges, issues, and opportunities in the research, design, and engineering of energy-constrained and energy-aware sensing systems. These are a technological cornerstone for new applications in smart energy, future transportation, environmental monitoring, and smart cities.

The call for papers attracted 15 submissions from Australia, Europe, and North America. All papers that were submitted received three reviews from experts in the area, and were evaluated for relevance, novelty, technical contribution, and presentation. Based on these reviews and the high quality of submissions, 12 of the submitted papers were finally included in the program to be presented and discussed at the workshop.

Delivering the ENSsys workshop is a significant undertaking and could not have been achieved without the help of many people. First and foremost, we would like to thank all of the authors who submitted contributions to ENSsys, and the members of the Technical Program Committee for their excellent and timely work reviewing submissions and helping to put together an excellent technical program. We would also like to thank our Website Chair Geoff Merrett for his assistance in promoting ENSsys and soliciting high quality submissions.

Finally, and most of all, we hope that you thoroughly enjoy this year's workshop – whether you are presenting, attending, or just reading these proceedings on the web! We also hope that you continue to support ENSsys in future years as this exciting field grows and continues to develop.

Enjoy ENSsys@SenSys!

ACM Workshop AIChallengeloT 2022

Message from Organizers

It is our pleasure to welcome you to the 4th International Workshop on Challenges in Artificial Intelligence and Machine Learning for Internet of Things (AIChallengeloT 2021), which is held in conjunction with ACM SenSys 2022 on November 6, 2022. Artificial intelligence (AI) and machine learning (ML) are key enabling technologies for many Internet of Things (IoT) applications. However, the collection and processing of data for AI and ML is very challenging in the IoT domain. For example, there are usually a large number of low-powered sensors deployed in large geographical areas with possibly intermittent network connectivity. The sensors and their collected data may be owned by different users or organizations, which can bring further obstacles to data collection due to privacy concerns and noisy labels provided by different users. The successful application of AI/ML approaches in such scenarios with noisy and decentralized data is difficult. In addition, the amount of collected data that can be used for training AI/ML models is usually proportional to the number of users in the system, but the system may not be able to attract many users without a well-trained AI/ML model, and it is challenging to solve this dilemma.

This workshop focuses on how to address the above and other unique challenges of applying AI/ML in IoT systems. The call for papers attracted submissions from Asia, Europe, South America, and North America. Out of 14 submitted papers, 10 regular papers have been accepted after a thorough review by the program. The papers were evaluated for novelty, relevance, and quality. Papers with forward-looking ideas that may initiate new research directions have been particularly encouraged. This workshop would not have been successful without the help of many people. We would like to thank all the authors who submitted their work to AIChallengeloT and the Technical Program Committee members who provided high-quality and timely reviews for the papers. We also thank the SenSys workshop chairs Pat Pannuto and Fatima Anwar for their assistance in putting together the workshop program and proceedings. Finally, we hope that you enjoy this year's AIChallengeloT workshop, whether you are presenting, attending, or just reading the proceedings on the web. We appreciate for your support for AIChallengeloT and hope that you will continue supporting this workshop in future years.

ACM Workshop USN 2022

Message from Organizers

It is our pleasure to welcome you to the First ACM Workshop on Urban Sensor Networks – USN’22, co-located with ACM SenSys ’22. Sustainable and resilient urbanization will be one of humanity’s grand challenges as the global urban population grows from about half of all people today to about two-thirds of all people by 2050. The rapid growth of cities presents numerous opportunities to use internet of things and wireless technologies to provide fine-grained insights into air quality, public health, mobility, and more to address the challenges that dense urban populations face today and in the future. Creating truly effective and transformative technology solutions requires a multidisciplinary approach incorporating both computer scientists and electrical engineers developing state of the art sensing, communication, and data science techniques as well as domain experts from urban planning, civil engineering, atmospheric science, and public health. Additionally, deploying sensing solutions at scale remains challenging and requires connecting with city and community leaders and working in partnership to develop effective solutions to power, connect, calibrate, and maintain networks.

This inaugural Urban Sensor Networks workshop aims to bring together this diverse community of researchers to share strategies to make the smart city dream become a reality. The workshop will provide a platform for attendees to share their work and to learn how it fits as part of the broader USN field. Our goal is to connect researchers working in high impact urban sensing problem domains with the cutting-edge technologies of the sensor networking community that can make these solutions a reality.

Our program will begin with presentations of submitted papers as well as invited talks from speakers who have implemented large scale USNs. Following these presentations, we will host a discussion forum to highlight high impact problems in this domain, common challenges and technical solutions. The goal of this discussion is to bring a diverse set of perspectives from different disciplines together and establish new research collaborations.

We would like to thank everyone who submitted contributions to USN’22, the members of the Technical Program Committee for their excellent and timely work reviewing submissions, and our invited speakers. We would also like to thank the organizers of Sensys for all of their hard work organizing the conference and giving us the opportunity to host this workshop. We hope that you enjoy USN’22 whether you are attending in person, virtually, or reading the proceedings. We hope that this will be the first of many events as this research area continues to grow.

Enjoy USN’22!

ACM Workshop DATA 2022

Message from the Chairs

We are happy to welcome you to the technical program of the 5th workshop International Workshop on Data: Acquisition To Analysis --- DATA'22, --- co-located with ACM conferences SenSys '22 and BuildSys '22. As the enthusiasm for and success of the Internet of Things (IoT), Cyber-Physical Systems (CPS), and Smart Buildings grows, so too does the volume and variety of data collected by these systems. How do we ensure that this data is of high quality, and how do we maximize the utility of collected data such that many projects can benefit from the time, cost, and effort of deployments? The Data: Acquisition To Analysis (DATA) workshop aims to look broadly at interesting data, bringing together a community of application and algorithm researchers in the sensing systems and building domains to promote breakthroughs from the integration of the generators and users of datasets.

The workshop is co-located with the SenSys and BuildSys conferences because these communities attract researchers and practitioners who develop new sensors and other sources of data and integrate data into novel applications in a variety of settings. In many cases, interesting data are collected and potentially made available to the broader community, but without any specific venue to advertise and describe the data. Conversely, it can be difficult for data consumers to discover datasets that meet their needs. DATA aims to bridge that gap.

The call for papers resulted in the acceptance of 15 of 20 submissions, comprising 2 fast-track dataset paper from SenSys and BuildSys, 1 short dataset paper and 12 full papers. The DATA workshop incorporates a keynote speech from Prof. Dinesh Bharadia (University of California San Diego) with title “Wireless sensing and robotics meet each other -- Datasets, AI, performance, novel sensing, and speed-ups”, and along with more than 30 people participating both in-person and remotely.

We would like to thank the TPC members for their insightful reviews and contributions, the artifact evaluation committee for carefully vetting the datasets, the panel members, and for all those who submitted work for consideration. We would also like to thank the SenSys publication chair Jay Taneja (University of Massachusetts Amherst) as well as the workshop chairs Pat Pannuto (University of California San Diego) and Fatima Anwar (University of Massachusetts Amherst), and general chairs Jeremy Gummeson (University of Massachusetts Amherst) and Sunghoon Ivan Lee (University of Massachusetts Amherst) for giving us the opportunity to hold ACM DATA 2022 this year.

ACM Workshop BlockSys 2022

Message from Organizers

It is with great pleasure that we welcome you to the technical program of BlockSys 2022, the 4th Workshop on Blockchain-enabled Networked Sensor Systems. BlockSys workshop focuses on research problems at the intersection of networked sensor systems and Blockchain. Networked sensor systems, as a key component of internet of things (IoT) have been widely used in various environments such as smart home, smart building, vehicular network, wearable computing, robotics systems, industrial control systems, etc. They capture human and physical-world dynamics and feed the data into large-scale analytical backends. Today's cloud-centric paradigm, however, does not genetically support trust management and privacy preservation; it also does not encourage information sharing in multi-stakeholder settings through incentives and payment mechanisms. As a result, complementary technologies that can offer to ensure data protection, incentivize information exchange, and reduce sharing and maintenance costs are highly desired.

We have seen increasing interest in tackling such problems by using emerging blockchain and other distributed ledger technologies. BlockSys-2022 aims to set up a stage for industry and academia to share wins and lessons. We have five full papers and two posters this year.

We would like to thank the TPC members for providing valuable suggestions and reviews to all the submitted papers. Finally, we would also like to thank the authors for their contributions to BlockSys-2022. We would like to thank the conference organizers, in particular, general chairs Jeremy Gummesson and Sunghoon Ivan Lee, for arranging and diligently monitoring key logistical issues. We also would like to thank the workshop co-chairs, Pat Pannuto and Fatima Anwar, for their support. Last but not least, we would like to thank the attendees for sharing their ideas with others and providing valuable feedback for improvements. We hope you will find the technical program thought-provoking and stimulating. We sincerely hope you enjoy the workshop!

ACM Workshop AgSys 2022

Message from Organizers

It is with great pleasure that we welcome you to the very first workshop on Agriculture and Food Systems, which was held in conjunction with ACM SenSys 2021.

Meeting the food and nutrition demands of the world population of over 10 billion by 2050 is a grand challenge that humanity is faced with. In its 2019 State of Food and Agriculture report, the UN identified that despite these needs, over 40% of all food grown today is wasted. This can happen anywhere from on the farm to post-harvest stages in the food supply chain. Factors influencing this unsustainable wastage range anywhere from inadequate monitoring to effects of climate change. Data driven agriculture has already shown promise in creating more sustainable agriculture practices. Proper monitoring of the post-harvest environment in which food is grown, stored or transported can also greatly help reduce this waste and make the Agri Food industry on the whole more sustainable and efficient.

With these challenges in mind, the workshop provides a platform for researchers to present their innovations in IoT, sensing, communication networks and optimization strategies that can help create a sustainable future for the food industry. With the involvement of our academic, agriculture and Industry partners, we hope to refine the problem space and connect the technology with practical needs that can help us meet the future food demands.

We would like to thank the attendees, the authors who submitted their valuable research, the program committee, the keynote speakers from Digital Green and Strella Biotech, the expert panelists, and lastly our demo presenter – to all of whom we attribute the success of the workshop. We would also like to thank the SenSys publication and workshop chairs for their valuable time and guidance.

We hope that you enjoy the workshop proceedings and look forward to your support in the future as we establish goals and evolve to address global challenges around agriculture and food.

AgSys Chairs,
Vaishnavi Ranganathan, Zerina Kapetanovic and Tusher Chakraborty
Microsoft Research, Redmond

Organizing Committee

Co-Chairs:

Vaishnavi Ranganathan, Microsoft Research

Zerina Kapetanovic, Microsoft Research and Stanford

Tusher Chakraborty, Microsoft Research

Technical Program Committee:

Akshay Gadre, University of Washington

Bhuvana Krishnaswamy, University of Wisconsin-Madison

Chandra Krintz, University of California - Santa Barbara

Deepak Vasisht, University of Illinois at Urbana-Champaign

Elahe Soltanaghahi, University of Illinois at Urbana-Champaign

Jingxian Wang, Microsoft Research and National University of Singapore

Marie-Jose Montpetit, Ferme d'Hiver, Brossard, Canada

Srinivasan Iyengar, Microsoft

Vikram Iyer, University of Washington

ACM Workshop CML-IOT 2022

Message from the Chairs

It was with great pleasure to welcome you to the technical program of CML-IOT 2022, the 4th Workshop on Continual and Multimodal Learning for Internet of Things, co-located with ACM SenSys 2022 on November 6, 2022. The Internet of Things (IoT) has brought an ever-growing amount of multimodal sensing data (e.g., natural language, speech, image, video, audio, virtual reality, WiFi, GPS, RFID, vibration). The statistical properties of this data vary significantly over time and depending on the sensing modality; these differences are hardly captured by conventional learning methods. Continual and multimodal learning allows the integration, adaptation and generalization of knowledge learned from experiential and heterogenous data to new situations. Therefore, continual and multimodal learning is an important step to improve the estimation, utilization, and security of real-world data from IoT systems. The Continual and Multimodal Learning for Internet of Things (CML-IOT) workshop aims to foster a community to tackle these challenges for a wide range of sensing modalities and application domains.

Previous years, CML-IOT was hosted in conjunction with the ACM International Joint Conference on Pervasive and Ubiquitous Computing (UbiComp) and the International Joint Conferences on Artificial Intelligence Organization (IJCAI). This year, we chose to host CML-IOT with ACM SenSys and BuildSys because of the rich work in all types of sensing and application domains that researchers in these communities work on. Because of the interdisciplinary nature of the challenges we aim to address, we hope to build a diverse community that allows researchers with different backgrounds to come together.

This year, we received 11 submissions from Asia, North America, and Europe. Each paper received at least three reviews from experts, who evaluated submissions based on relevancy, novelty, technical contributions, and presentation quality. In total, 9 high-quality papers were selected for publication and presentation in Boston, Massachusetts, USA. This year, we are fortunate to have two outstanding keynotes from Professor Wen Hu from the University of New South Wales, Australia and Professor Wan Du from the University of California, Merced.

CML-IOT 2022 would not be possible without the help of numerous individuals. We would like to thank all authors and individuals who submitted their contributions to CML-IOT, members of the Technical Program Committee for providing their expertise and hard work in reviewing submissions to create an excellent program, Professor Wen Hu and Professor Wan Du for their excellent keynotes, and all attendees of the workshop. We would also like to express our thanks and gratitude to members of the steering committee, who were very active and provided valuable guidance in organizing CML-IOT 2022, and members of the SenSys 2022 organizing committee for working with us to make CML-IOT 2022 a success.

We hope you enjoy CML-IOT 2022 as much as we enjoyed organizing the workshop, and we hope you can join us this year and future years in helping us grow this wonderful community.

Stephen Xia (University of California, Berkeley, and Columbia University)

Contents

Session 1: New Applications

Breaking edge shackles: Infrastructure-free collaborative mobile augmented reality 1

Kittipat Apicharttrisor, Jiasi Chen (*University of California, Riverside*); Vyas Sekar, Anthony Rowe (*Carnegie Mellon University*); Srikanth V. Krishnamurthy (*University of California, Riverside*)

AutoMatch: Leveraging Traffic Camera to Improve Perception and Localization of Autonomous Vehicles 16

Yuze He (*The Chinese University of Hong Kong*); Li Ma (*The Hong Kong University of Science and Technology*); Jiahe Cui (*School of Computer Science and Engineering, Beihang University*); Zhenyu Yan, Guoliang Xing (*The Chinese University of Hong Kong*); Sen Wang, Qintao Hu, Chen Pan (*Huawei Technologies*)

M5: Facilitating Multi-user Volumetric Content Delivery with Multi-lobe Multicast over mmWave . 31

Ding Zhang, Puqi Zhou, Bo Han, Parth Pathak (*George Mason University*)

Quantifying the Physical Separability of RF-based Multi-Person Respiration Monitoring via SINR . 47

Shujie Zhang, Tianyue Zheng, Hongbo Wang (*Nanyang Technological University*); Zhe Chen (*China-Singapore International Joint Research Institute*); Jun Luo (*Nanyang Technological University*)

Telesonar: Robocall Alarm System by Detecting Echo Channel and Breath Timing 61

Zhenyu Yan (*The Chinese University of Hong Kong*); Rui Tan, Qun Song (*Nanyang Technological University*); Xiaoxuan Lu (*University of Edinburgh*)

NFCapsule: An Ingestible Sensor Pill for Eosinophilic Esophagitis Detection Based on Near-field Coupling 75

Junbo Zhang, Gaurav Balakrishnan, Sruti Srinidhi, Arnav Bhat, Swarun Kumar, Christopher Bettinger (*Carnegie Mellon University*)

Session 2: Machine Learning for Mobile Systems

BlastNet: Exploiting Duo-Blocks for Cross-Processor Real-Time DNN Inference 91

Neiwen Ling, Xuan Huang, Zhihe Zhao (*The Chinese University of Hong Kong*); Nan Guan (*City University of Hong Kong*); Zhenyu Yan, Guoliang Xing (*The Chinese University of Hong Kong*)

FedSEA: A Semi-Asynchronous Federated Learning Framework for Extremely Heterogeneous Devices 106

Jingwei Sun, Ang Li, Lin Duan (*Duke University*); Samiul Alam (*Michigan State University*); Xuliang Deng (*Duke University*); Xin Guo, Haiming Wang (*Lenovo Research*); Maria Gorlatova (*Duke University*); Mi Zhang (*Ohio State University*); Hai Li, Yiran Chen (*Duke University*)

Real-Time Tracking of Smartwatch Orientation and Location by Multitask Learning 120

Miaomiao Liu, Sikai Yang, Wyssanie Chomsin, Wan Du (*University of California, Merced*)

AiFi: AI-Enabled WiFi Interference Cancellation with Commodity PHY-Layer Information 134

Ruirong Chen, Kai Huang, Wei Gao (*University of Pittsburgh*)

Hearing Heartbeat from Voice: Towards Next Generation Voice-User Interfaces with Cardiac Sensing Functions	149
Chenhan Xu, Tianyu Chen, Huining Li, Alexander Gherardi, Michelle Weng (<i>University at Buffalo, SUNY</i>); Zhengxiong Li (<i>University of Colorado Denver</i>); Wenyao Xu (<i>University at Buffalo, SUNY</i>)	

PriMask: Cascadable and Collusion-Resilient Data Masking for Mobile Cloud Inference	164
Linshan Jiang, Qun Song (<i>School of Computer Science and Engineering, Nanyang Technological University, Singapore</i>); Rui Tan, Mo Li (<i>Nanyang Technological University</i>)	

Session 3: Low-power Systems

MaLoRaGW: Multi-User MIMO Transmission for LoRa	179
Hossein Pirayesh, Shichen Zhang, Pedram Kheirkhah Sangdeh, Huacheng Zeng (<i>Michigan State University</i>)	

LLDPC: A Low-Density Parity-Check Coding Scheme for LoRa Networks	193
Kang Yang, Wan Du (<i>University of California Merced</i>)	

Protean: An Energy-Efficient and Heterogeneous Platform for Adaptive and Hardware-Accelerated Battery-free Computing	207
Abu Bakar, Rishabh Goel (<i>Georgia Institute of Technology</i>); Jasper de Winkel (<i>Delft University of Technology</i>); Jason Huang (<i>Northwestern University</i>); Saad Ahmed (<i>Georgia Institute of Technology</i>); Bashima Islam (<i>Worcester Polytechnic Institute</i>); Przemysław Pawełczak (<i>Delft University of Technology</i>); Kasim Sinan Yildirim (<i>University of Trento</i>); Josiah Hester (<i>Georgia Institute of Technology</i>)	

DIPS: Debug Intermittently-Powered Systems Like Any Embedded System	222
Jasper de Winkel, Tom Hoefnagel, Boris Blokland, Przemysław Pawełczak (<i>Delft University of Technology</i>)	

Adaptive Intelligence for Batteryless Sensors Using Software-Accelerated Tsetlin Machines . . .	236
Abu Bakar (<i>Georgia Institute of Technology</i>); Tousif Rahman, Rishad Shafik (<i>Newcastle University</i>); Fahim Kawsar, Alessandro Montanari (<i>Nokia Bell Labs</i>)	

Bracelet+: Harvesting the Leaked RF Energy in VLC with Wearable Bracelet Antenna	250
Minhao Cui (<i>University of Massachusetts Amherst</i>); Qing Wang (<i>Delft University of Technology</i>); Jie Xiong (<i>University of Massachusetts Amherst</i>)	

Session 4: Systems for Voice, Speech and Video Processing

Turbo: Opportunistic Enhancement for Edge Video Analytics	263
Yan Lu (<i>New York University</i>); Shiqi Jiang, Ting Cao (<i>Microsoft Research</i>); Yuanchao Shu (<i>Microsoft</i>)	

SQEE: A Machine Perception Approach to Sensing Quality Evaluation at the Edge by Uncertainty Quantification	277
Shuheng Li, Jingbo Shang, Rajesh Gupta (<i>University of California, San Diego</i>); Dezhi Hong (<i>Amazon</i>)	

Enhancing Video Analytics Accuracy via Real-time Automated Camera Parameter Tuning	291
sibendu paul (<i>Purdue university</i>); Kunal Rao, Giuseppe Coviello (<i>NEC Laboratories America Inc.</i>); Murugan Sankaradas (<i>NEC Laboratories America</i>); Oliver Po (<i>NEC Laboratories America Inc.</i>); Y. Charlie Hu (<i>Purdue University</i>); Srimat Chakradhar (<i>NEC Labs</i>)	

SpeechQoE: A Novel Personalized QoE Assessment Model for Voice Services via Speech Sensing	305
Chaowei Wang, Huadi Zhu, Ming Li (<i>The University of Texas at Arlington</i>)	
Gaze Tracking on Any Surface with Your Phone	320
Jiani Cao, Chengdong Lin (<i>City University of Hong Kong</i>); Yang Liu (<i>University of Cambridge</i>); Zhenjiang Li (<i>City University of Hong Kong</i>)	
Capricorn: Towards Real-time Rich Scene Analysis Using RF-Vision Sensor Fusion	334
Ziqi Wang, Ankur Sarker, Jason Wu, Derek Hua, Gaofeng Dong, Akash Deep Singh, Mani Srivastava (<i>University of California, Los Angeles</i>)	
 Session 5: RF Sensing Systems	
Embracing LoRa Sensing with Device Mobility	349
Binbin Xie, Deepak Ganesan, Jie Xiong (<i>University of Massachusetts Amherst</i>)	
Wi-Mesh: A WiFi Vision-based Approach for 3D Human Mesh Construction	362
Yichao Wang, Yili Ren (<i>Florida State University</i>); Yingying Chen (<i>Rutgers University</i>); Jie Yang (<i>Florida State University</i>)	
Synthesized Millimeter-Waves for Human Motion Sensing	377
Xiaotong Zhang (<i>City University of Hong Kong & Southern University of Science and Technology</i>); Zhenjiang Li (<i>City University of Hong Kong</i>); Jin Zhang (<i>Southern University of Science and Technology</i>)	
M4esh: mmWave-based 3D Human Mesh Construction for Multiple Subjects	391
Hongfei Xue (<i>University at Buffalo, SUNY</i>); Qiming Cao (<i>Purdue University</i>); Yan Ju, Haochen Hu (<i>University at Buffalo, SUNY</i>); Haoyu Wang (<i>Purdue University</i>); Aidong Zhang (<i>University of Virginia</i>); Lu Su (<i>Purdue University</i>)	
Solving the WiFi Sensing Dilemma in Reality Leveraging Conformal Prediction	407
Kailong Wang, Cong Shi (<i>Rutgers University</i>); Jerry Cheng (<i>New York Institute of Technology</i>); Yan Wang (<i>Temple University</i>); Minge Xie, Yingying Chen (<i>Rutgers University</i>)	
LTE-based Low-cost and Low-power Soil Moisture Sensing	421
Yuda Feng (<i>University of Massachusetts Amherst</i>); Yaxiong Xie (<i>University at Buffalo, SUNY</i>); Deepak Ganesan, Jie Xiong (<i>University of Massachusetts Amherst</i>)	
 Session 6: Light and Acoustic Sensing Systems	
Harmony: A Time Synchronisation System for Visible Light Communication Access Points	435
Kasun Hewage (<i>Uppsala University</i>); Thiemo Voigt (<i>RISE, Uppsala University</i>)	
Low-Latency Visible Light Backscatter Networking with RetroMUMIMO	448
Kenuo Xu, Chen Gong, Bo Liang, Yue Wu, Boya Di, Lingyang Song, Chenren Xu (<i>Peking University</i>)	
Room-scale Hand Gesture Recognition Using Smart Speakers	462
Dong Li, Jialin Liu, Sunghoon Ivan Lee, Jie Xiong (<i>University of Massachusetts Amherst</i>)	
AIM: Acoustic Inertial Measurement for Indoor Drone Localization and Tracking	476
Yimiao Sun, Weiguo Wang (<i>Tsinghua University</i>); Luca Mottola (<i>Politecnico di Milano and RI.SE Sweden</i>); Ruijin Wang (<i>University of Electronic Science and Technology of China</i>); Yuan He (<i>Tsinghua University</i>)	

Indoor Smartphone SLAM with Learned Echoic Location Features	489
Wenjie Luo, Qun Song (<i>Nanyang Technological University</i>); Zhenyu Yan (<i>The Chinese University of Hong Kong</i>); Rui Tan (<i>Nanyang Technological University</i>); Guosheng Lin (<i>Nanyang Technological University, Singapore</i>)	
MicNest: Long-Range Instant Acoustic Localization of Drones in Precise Landing	504
Weiguo Wang (<i>Tsinghua University</i>); Luca Mottola (<i>Politecnico di Milano and RI.SE Sweden</i>); Yuan He, Jinming Li, Yimiao Sun, Shuai Li (<i>Tsinghua University</i>); Hua Jing, Yulei Wang (<i>Meituan</i>)	
Session 7: Security and Privacy & Online Session 1	
Light Auditor: Power Measurement can tell Private Data Leakage through IoT Covert Channels .	518
Woosub Jung, Kailai Cui, Kenneth Koltermann, Junjie Wang (<i>William & Mary</i>); Chunsheng Xin (<i>Old Dominion University</i>); Gang Zhou (<i>William & Mary</i>)	
Towards Backdoor Attacks against LiDAR Object Detection in Autonomous Driving	533
Yan Zhang (<i>University of Georgia</i>); Yi Zhu (<i>University at Buffalo, the State University at New York</i>); Zihao Liu, Chenglin Miao (<i>University of Georgia</i>); Foad Hajiaghajani (<i>Department of Computer Science and Engineering, University at Buffalo, SUNY</i>); Lu Su (<i>Purdue University</i>); Chunming Qiao (<i>SUNY at Buffalo</i>)	
Reverse Engineering Physical Semantics of PLC Program Variables Using Control Invariants . . .	548
Zeyu Yang (<i>Zhejiang University</i>); Liang He (<i>University of Colorado Denver</i>); Hua Yu, Chengcheng Zhao, Peng Cheng, Jiming Chen (<i>Zhejiang University</i>)	
SiFall: Practical Online Fall Detection with RF Sensing	563
Sijie Ji (<i>Nanyang Technological University</i>); Yaxiong Xie (<i>University at Buffalo</i>); Mo Li (<i>Nanyang Technological University</i>)	
HyLink: Towards High Throughput LPWANs with LoRa Compatible Communication	578
Xianjin Xia, Qianwu Chen, Ningning Hou, Yuanqing Zheng (<i>The Hong Kong Polytechnic University</i>)	
TailorFL: Dual-Personalized Federated Learning under System and Data Heterogeneity	592
Yongheng Deng, Weining Chen, Ju Ren (<i>Tsinghua University</i>); Feng Lyu (<i>Central South University</i>); Yang Liu, Yunxin Liu (<i>Institute for AI Industry Research (AIR), Tsinghua University</i>); Yaoxue Zhang (<i>Tsinghua University</i>)

Yuke Zhang, Ken Takaki, Hiroaki Murakami, Takuya Sasatani, Yoshihiro Kawahara (<i>The University of Tokyo</i>)	
Poster Abstract: Towards Deployable RFID Localization System for Logistics Network	849
Puru Wang (<i>MIT</i>); Bo Liang (<i>Peking University</i>); Renjie Zhao (<i>University of California San Diego</i>); Pengyu Zhang (<i>Alibaba Group</i>); Xinyu Zhang (<i>University of California San Diego</i>); Chenren Xu (<i>Peking University</i>)	
Poster Abstract: Towards Fine-Grained Air Quality Sensing in Urban Environments	851
Brian Krupp, Julia Gersey, Jonathon Fagert, Tony Mlady (<i>Baldwin Wallace University</i>)	
Poster Abstract: Towards Remote Auscultation With Commodity Earphones	853
Tao Chen (<i>University of Pittsburgh</i>); Xiaoran Fan (<i>Google</i>); Yongjie Yang, Longfei Shangguan (<i>University of Pittsburgh</i>)	
Poster Abstract: Towards Server-Level Power Monitoring in Data Centers Using Single-Point Voltage Measurement	855
Pranjol Sen Gupta, Zahidur Talukder, Mohammad A Islam, Phuc "VP" Nguyen (<i>University of Texas at Arlington</i>)	
Poster Abstract: Ultra-Wideband Backscatter Towards General Passive IoT Localization	857
Renjie Zhao (<i>University of California San Diego</i>); Pengyu Zhang, Yunfei Ma (<i>Alibaba Group</i>); Xinyu Zhang (<i>University of California San Diego</i>)	
Poster abstract: Use of a Long Short-Term Memory Network in Radio Tomography to Track People Indoors	859
Tomasz Rymarczyk (<i>University of Economics and Innovation in Lublin</i>); Grzegorz Kłosowski (<i>Lublin University of Technology</i>); Przemysław Adamkiewicz, Michał Styła (<i>University of Economics and Innovation, Lublin, Poland</i>); Bartłomiej Kiczek (<i>Research & Development Center Netrix S.A., Lublin, Poland</i>)	

Poster abstract: Use of the Two-Stage Neural System in Electrical Impedance Tomography for Imaging Moisture Inside Walls	861
Grzegorz Kłosowski (<i>Lublin University of Technology</i>); Tomasz Rymarczyk, Konrad Niderla (<i>University of Economics and Innovation in Lublin</i>)	
Poster abstract: UV index estimation leveraging GNSS sensors on smartphones	863
Riku Ishioka (<i>The University of Tokyo</i>); Kota Tsubouchi (<i>Yahoo Japan Corporation</i>); Yuuki Nishiyama, Kaoru Sezaki (<i>The University of Tokyo</i>)	
Workshop - ENSsys 2022	
The Design of a Battery-less Wireless Condition Monitoring System for Industrial Circuit Breakers	865
Felix Sutton (<i>ABB Research Center, Switzerland</i>)	
Towards automated design optimization of electromagnetic energy harvesting transducers . .	871
Tra Nguyen Phan, Bengt Oelmann, Sebastian Bader (<i>Mid Sweden University</i>)	
Multihop Networking for Intermittent Devices	878
Edward Longman, Mohammed El-Hajjar, Geoff V. Merrett (<i>University of Southampton</i>)	
PROGNOES: Prediction of haRvestable sOlar enerGy based on suN irradiatiOn and wEather conditionS	885
Sayedsepehr Mosavat (<i>University of Duisburg-Essen, Niederrhein University of Applied Sciences</i>); Pedram Golkar (<i>University of Duisburg-Essen</i>); Matteo Zella (<i>Niederrhein University of Applied Sciences</i>); Pedro José Marrón (<i>University of Duisburg-Essen</i>)	
Leakage-Aware Lifetime Estimation of Battery-Free Sensor Nodes powered by Supercapacitors	892
Hannah Brunner, Carlo Alberto Boano, Kay Roemer (<i>Graz University of Technology</i>)	
Wireless Identification and Sensing Platform Version 6.0	899
Rohan Menon, Rohit Gujarathi, Ali Saffari, Joshua R. Smith (<i>University of Washington</i>)	
Hardware to enable large-scale deployment and observation of soil microbial fuel cells	906
John Madden (<i>UC Santa Cruz</i>); Gabriel Marcano (<i>UC San Diego</i>); Stephen Taylor (<i>UC Santa Cruz</i>); Pat Pannuto (<i>UC San Diego</i>); Colleen Josephson (<i>UC Santa Cruz</i>)	
LoRa Based Linear Network Applications, Design Considerations and Open Challenges: A Review	913
Rao Muzamal Liaqat, Philip Branch, Jason But (<i>Swinburne University of Technology</i>)	
Spreading Factor Detection for low-cost Adaptive Data Rate in LoRaWAN Gateways	918
Daniel Koch, Muhammad Osama Shahid, Bhuvana Krishnaswamy (<i>University of Wisconsin-Madison</i>)	
Old Dog, New Tricks: Seeking Metrics for Energy Harvesters as Sensors	925
Nicole Tobias, Jacob Sorber (<i>Clemson University</i>)	
A Tale of Two Intermittencies	928
Mathew L. Wymore, Henry Duwe (<i>Iowa State University</i>)	

Circularity in Energy Harvesting Computational "Things"	931
Nivedita Arora (<i>Georgia Institute of Technology</i>); Vikram Iyer (<i>University of Washington</i>); Hyunjoo Oh (<i>Georgia Institute of Technology</i>); Gregory D. Abowd (<i>Northeastern University</i>); Josiah D. Hester (<i>Georgia Institute of Technology</i>)	
Workshop - AIChallengeIoT 22	
Ultra-low Power DNN Accelerators for IoT: Resource Characterisation of the MAX78000	934
Arthur Moss (<i>Nokia Bell Labs and Newcastle University</i>); Hyunjong Lee (<i>Nokia Bell Labs and KAIST</i>); Lei Xun (<i>Nokia Bell Labs and University of Southampton</i>); Chulhong Min, Fahim Kawsar, Alessandro Montanari (<i>Nokia Bell Labs</i>)	
ElasticAI-Creator: Optimizing Neural Networks for Time-Series-Analysis for On-Device Machine Learning in IoT	941
Chao Qian, Lukas Einhaus, Gregor Schiele (<i>University of Duisburg-Essen</i>)	
Smart Objects: Impact localization powered by TinyML	947
Ioannis Katsidimas (<i>Department of Computer Engineering and Informatics, University of Patras, Greece</i>); Thanasis Kotzakolios (<i>Department of Mechanical Engineering and Aeronautics, University of Patras, Greece</i>); Sotiris Nikolettseas (<i>Department of Computer Engineering and Informatics, University of Patras, Greece and Computer Technology Institute and Press "Diophantus", Greece</i>); Stefanos H. Panagiotou, Constantinos Tsakonas (<i>Department of Computer Engineering and Informatics, University of Patras, Greece</i>)	
The Impact of Cascaded Optimizations in CNN models and End-device Deployment	954
Hanan Hussain, PS Tamizharasan (<i>BITS Pilani, Dubai Campus, UAE</i>)	
Evaluation of ASR for Conversational Speech in Voice Assistants: A Linguistic Perspective	962
Hannaneh B. Pasandi (<i>Virginia Commonwealth University</i>); Haniyeh B. Pasandi (<i>University of Maryland Baltimore County</i>)	
CIPhy: Causal Intervention with Physical Confounder from IoT Sensor Data for Robust Occupant Information Inference	966
Zhizhang Hu (<i>University of California, Merced</i>); Tong Yu (<i>Carnegie Mellon University</i>); Ruiyi Zhang (<i>Duke University</i>); Shijia Pan (<i>University of California, Merced</i>)	
CycleGAN based Unsupervised Domain Adaptation for Machine Fault Diagnosis	973
Naibedya Pattnaik (<i>Embedded Devices and Intelligent Systems, TCS Research, Bangalore, India</i>); Uday Sai Vemula (<i>Indian Institute of Technology Madras, Chennai, India</i>); Kriti Kumar, A. Anil Kumar (<i>Embedded Devices and Intelligent Systems, TCS Research, Bangalore, India</i>); Angshul Majumdar (<i>Indraprastha Institute of Information Technology Delhi, New Delhi, India</i>); M.Girish Chandra, Arpan Pal (<i>Embedded Devices and Intelligent Systems, TCS Research, Bangalore, India</i>)	
Federated Learning Biases in Heterogeneous Edge-Devices - A Case-study	980
Khotso Selialia, Yasra Chandio, Fatima M. Anwar (<i>University of Massachusetts Amherst</i>)	
Security Analysis of SplitFed Learning	987
Momin Ahmad Khan, Virat Shejwalkar (<i>University of Massachusetts Amherst</i>); Amir Houmansadr (<i>UMass Amherst</i>); Fatima M. Anwar (<i>University of Massachusetts Amherst</i>)	
Increasing the Intelligence of Low Power Sensors with Autonomous Agents	994
Jannik William (<i>ETH Zürich</i>); Matuzalem Muller dos Santos, Jomi Fred Hübner, Maiquel Brito (<i>Universidade Federal de Santa Catarina</i>); Danai Vachtsevanou, Andres Gomez (<i>University of St.Gallen</i>)	

Workshop - USN 22

- From Participatory Sensing to Public-private Partnership: The Development of AirBox Project in Taiwan** 1000
Ming-Kuang Chung, Fu-Shiang Ching, Ling-Jyh Chen (*Institute of Information Science, Academia Sinica*)

Workshop - DATA 22

- Dataset: An Indoor Smart Traffic Dataset and Data Collection System** 1007
Neiwen Ling, Yuze He (*The Chinese University of Hong Kong*); Nan Guan (*City University of Hong Kong*); Heming Fu, Guoliang Xing (*The Chinese University of Hong Kong*)
- Dataset: Green Mark certified buildings metadata from Singapore** 1011
Yi Ting Teo, Matias Quintana, Muhammad Zikry Bin Sabarudin, Charlene Tan, Adrian Chong, Clayton Miller (*National University of Singapore*)
- Dataset: HoloSet - A Dataset for Visual-Inertial Pose Estimation in Extended Reality** 1014
Yasra Chandio, Noman Bashir, Fatima M. Anwar (*University of Massachusetts Amherst*)
- Dataset: Impact Events for Structural Health Monitoring of a Plastic Thin Plate** 1020
Ioannis Katsidimas (*Department of Computer Engineering and Informatics, University of Patras, Greece*); Thanasis Kotzakolios (*Department of Mechanical Engineering and Aeronautics, University of Patras, Greece*); Sotiris Nikolettseas (*Department of Computer Engineering and Informatics, University of Patras, Greece and Computer Technology Institute and Press "Diophantus", Greece*); Stefanos H. Panagiotou, Konstantinos Timpilis, Constantinos Tsakonas (*Department of Computer Engineering and Informatics, University of Patras, Greece*)
- Interlinking the Brick Schema with Building Domain Ontologies** 1026
Celia Garrido-Hidalgo (*Instituto de Investigación en Informática de Albacete, Universidad de Castilla-La Mancha*); Jonathan Fürst (*Zürich University of Applied Sciences and NEC Laboratories Europe*); Bin Cheng (*NEC Laboratories Europe*); Luis Roda-Sanchez (*NEC Ibérica S.L. and Instituto de Investigación en Informática de Albacete, Universidad de Castilla-La Mancha*); Teresa Olivares (*Departamento de Sistemas Informáticos, Universidad de Castilla-La Mancha*); Ernő Kovacs (*NEC Laboratories Europe*)
- SolarWalk Dataset: Occupant Identification using Indoor Photovoltaic Harvester Output Voltage** 1031
Nurani Saoda, Md Fazlay Rabbi Masum Billah, Victor Ariel Leal Sobral, Bradford Campbell (*University of Virginia*)
- ThingSpeak in the Wild: Exploring 38K Visualizations of IoT Data** 1035
Thomas Zachariah (*University of California, Berkeley*); Noah Klugman (*nLine, Inc.*); Prabal Dutta (*University of California, Berkeley*)
- Design and Deployment of a Multi-Modal Multi-Node Sensor Data Collection Platform** 1041
Shiwei Fang (*UMass Amherst*); Ankur Sarker, Ziqi Wang, Mani Srivastava (*University of California, Los Angeles*); Benjamin Marlin, Deepak Ganesan (*UMass Amherst*)
- Lessons Learned from Developing Emotion Recognition System for Everyday Life** 1047
Stanisław Saganowski, Jan Miszczyk, Dominika Kunc, Dzmitry Lisouski, Przemysław Kazienko (*Department of Artificial Intelligence, Faculty of Information and Communication Technology, Wrocław University of Science and Technology*)

Non-acoustic speech sensing system based on flexible piezoelectric	1055
Shiji Yuan (<i>School of Large Aircraft Advanced Training Center, Beihang University</i>); Ying Sun (<i>School of Instrumentation and Optoelectronic Engineering, Beihang University</i>); Shuai Wang (<i>School of Computer Science and Engineering, Beihang University</i>); Xinlei Chen (<i>Shenzhen International Graduate, Tsinghua University</i>); Ying Ding (<i>School of Instrumentation and Optoelectronic Engineering, Beihang University</i>); Dezhi Zheng (<i>Research Institute of Frontier Science, Beihang University</i>); Shangchun Fan (<i>School of Instrumentation and Optoelectronic Engineering, Beihang University</i>)	
Simultaneous Sporadic Sensor Anomaly Detection for Smart Homes	1061
Hyunwoo Jung, Wootack Kim, Hyuna Seo, Youngki Lee (<i>Seoul National University</i>)	
Grey-brick buildings, an open data set of calibrated RC models of Dutch residential building heat dynamics	1067
Julien Leprince (<i>Technical University of Eindhoven</i>); Clayton Miller (<i>National University of Singapore</i>); Henrik Madsen (<i>Technical University of Denmark</i>); Kaustav Basu, Rik van der Vlist (<i>Eneco</i>); Wim Zeiler (<i>Technical University of Eindhoven</i>)	
Testbed Hardware Design to Collect Data for Underground PVC Water Pipe Crack Detection: Challenges and Solutions	1072
Vinh Q. C. Tran, Duc V. Le (<i>University of Twente</i>); Doekle R. Yntema (<i>Wetsus</i>); Paul J.M. Havinga (<i>University of Twente</i>)	
C-RIDGE: Indoor CO2 Data Collection System for Large Venues Based on Prior Knowledge	1077
Yifei Sun (<i>School of Large Aircraft Advanced Training Center, Beihang University</i>); Yuxuan Liu (<i>Tsinghua-Berkeley Shenzhen Institute, Tsinghua University</i>); Ziteng Wang, Xiaolei Qu (<i>School of Instrumentation and Optoelectronic Engineering, Beihang University</i>); Dezhi Zheng (<i>Research Institute for Frontier Science, Beihang University</i>); Xinlei Chen (<i>Shenzhen International Graduate School, Tsinghua University</i>)	
Transforming IoT Data Preprocessing: A Holistic, Normalized and Distributed Approach	1083
Amal Tawakuli, Daniel Kaiser, Thomas Engel (<i>University of Luxembourg</i>)	
Workshop - AgSys 22	
Adaptive Deployment for Autonomous Agricultural UAV Swarms	1089
Jayson Boubin (<i>Binghamton University</i>); Zichen Zhang, John Chumley, Christopher Stewart (<i>The Ohio State University</i>)	
DaQual: Data Quality Assessment for Tree Trunk Relative Water Content Sensors in a Pomegranate Orchard	1096
Yue Zhang, Abdias Tellez Benitez, Reza Ehsani, Shijia Pan (<i>University of California, Merced</i>)	
PigV²: Monitoring Pig Vital Signs through Ground Vibrations Induced by Heartbeat and Respiration	1102
Yiwen Dong (<i>Stanford University</i>); Jesse R Codling (<i>University of Michigan</i>); Gary Rohrer, Jeremy Miles (<i>USDA, ARS, U.S. Meat Animal Research Center, Clay Center</i>); Sudhendu Sharma, Tami Brown-Brandl (<i>University of Nebraska-Lincoln</i>); Pei Zhang (<i>University of Michigan</i>); Hae Young Noh (<i>Stanford University</i>)	
Attention-Based Deep Bayesian Counting For AI-Augmented Agriculture	1109
Yucheng Wang (<i>Texas A&M University</i>); Mengmeng Gu (<i>Colorado State University</i>); Mingyuan Zhou (<i>University of Texas, Austin</i>); Xiaoning Qian (<i>Texas A&M University</i>)	

Towards the Plant-Based Sensor: Agricultural Energy Harvesting and Sensing Experiments . . .	1116
Tyler Luong, Stewart J. Thomas (<i>Bucknell University</i>)	
CASPER: Criticality-Aware Self-Powered Wireless in-vivo Sensing Edge for Precision Animal Agriculture	1123
Upinder Kaur, Richard Voyles (<i>Purdue University</i>)	
Smart Pallets: Toward Self-Powered Pallet-level Environmental Sensors for Food Supply Chains	1130
Ali Saffari, Vikram Iyer (<i>University of Washington</i>); Zerina Kapetanovic, Vaishnavi Ranganathan (<i>Microsoft Research</i>)	
Workshop - CMLIoT 22	
Towards Data-efficient Continuous Learning for Edge Video Analytics via Smart Caching	1136
Lei Zhang, Guanyu Gao (<i>Nanjing University of Science and Technology</i>); Huaizheng Zhang (<i>Nanyang Technological University</i>)	
Near-real-time Seismic Human Fatality Information Retrieval from Social Media with Few-shot Large-Language Models	1141
James Hou, Susu Xu (<i>Stony Brook University</i>)	
H-SwarmLoc: Efficient Scheduling for Localization of Heterogeneous MAV Swarm with Deep Reinforcement Learning	1148
Haoyang Wang (<i>Shenzhen International Graduate School, Tsinghua University</i>); Xuecheng Chen (<i>Tsinghua-Berkeley Shenzhen Institute, Tsinghua University</i>); Yuhang Cheng (<i>Shenzhen International Graduate School, Tsinghua University</i>); Chenye Wu (<i>The Chinese University of Hong Kong, Shenzhen</i>); Fan Dang (<i>Global Innovation Exchange, Tsinghua University</i>); Xinlei Chen (<i>Shenzhen International Graduate School, Tsinghua University</i>)	
Discovering and Understanding Algorithmic Biases in Autonomous Pedestrian Trajectory Predictions	1155
Andrew Bae, Susu Xu (<i>Stony Brook University</i>)	
Riemannian Geometric Instance Filtering for Transfer Learning in Brain-Computer Interfaces . .	1162
Qianxin Hui, Xiaolin Liu (<i>School of Instrumentation and Optoelectronic Engineering, Beihang University</i>); Yang Li (<i>Tsinghua University</i>); Susu Xu (<i>Civil Engineering, Stony Brook University</i>); Shuailei Zhang, Ying Sun (<i>School of Instrumentation and Optoelectronic Engineering, Beihang University</i>); Shuai Wang (<i>Research Institute for Frontier Science and School of Computer Science and Engineering, Beihang University</i>); Xinlei Chen (<i>Tsinghua-Berkeley Shenzhen Institute and Tsinghua Shenzhen International Graduate School, Tsinghua University, Peng Cheng Laboratory</i>); Dezhi Zheng (<i>Research Institute for Frontier Science, Beijing Advanced Innovation Center for Big Data-based Precision Medicine, Key Laboratory of Precision Opto-mechatronics Technology and School of Instrumentation and Optoelectronic Engineering, Beihang University</i>)	
GaitVibe+: Enhancing Structural Vibration-based Footstep Localization Using Temporary Cameras for In-home Gait Analysis	1168
Yiwen Dong, Jingxiao Liu, Hae Young Noh (<i>Stanford University</i>)	
Memory-Efficient Domain Incremental Learning for Internet of Things	1175
Yuqing Zhao, Divya Saxena, Jiannong Cao (<i>The Hong Kong Polytechnic University</i>)	

Out-Clinic Pulmonary Disease Evaluation via Acoustic Sensing and Multi-task Learning on Commodity Smartphones	1182
Xiangyu Yin, Kai Huang, Erick Forno, Wei Chen, Heng Huang, Wei Gao (<i>University of Pittsburgh</i>)	

Intelligent Continuous Monitoring to Handle Data Distributional Changes for IoT Systems	1189
Soma Bandyopadhyay, Anish Datta (<i>TCS Research</i>); Arpan Pal (<i>TCS Research and Innovation</i>); Srinivas Raghu Raman Gadepally (<i>TATA Consultancy Services</i>)
